

Automotive Mobile Stock

Expedite your internal processes, reduce human error and, above all, increase the profitability of your company in the course of everyday warehouse activity. We present an online solution for managing your stock based around a wireless network, hand-held mobile terminals and bar codes.

Mobile Stock is designed to perform most warehouse operations, namely availability of goods in stock, receipt / issuance of goods to / from the warehouse, sale of goods from the warehouse, warehouse inventory, movement of goods within a warehouse or between warehouses and much more.

What can you expect from the Mobile Stock solution?

Mobility in the warehouse

An online connection to any DMS (Dealer Management System) is provided via a wireless Wi-Fi network.

Thanks to this connection you have the ability to use Mobile Stock wherever you have signal coverage.

Data is written directly to the DMS making its acquisition much simpler and faster.

Error mitigation/prevention

Use of Mobile Stock will significantly reduce the error rate that occurs when manually entering

data into the system. Through utilizing unique identification by barcode goods can be exchanged

without a problem and you will be free of the need to manually retype data from paper into the system.

Speeding up your everyday activities

Eliminate the need to search hundreds of stock item codes / spare parts. Mobile Stock allows you

to quickly and efficiently carry out warehouse operations using a hand-held data reader with

barcode scanner. Stock out and preparation of service orders are significantly faster and more efficient.

Always live information in real time

You will have the flow of goods and spare parts for your warehouses

fully under control and you will be able to work with precise, detailed

and constantly updated information in real time.

Easy connection to DMS

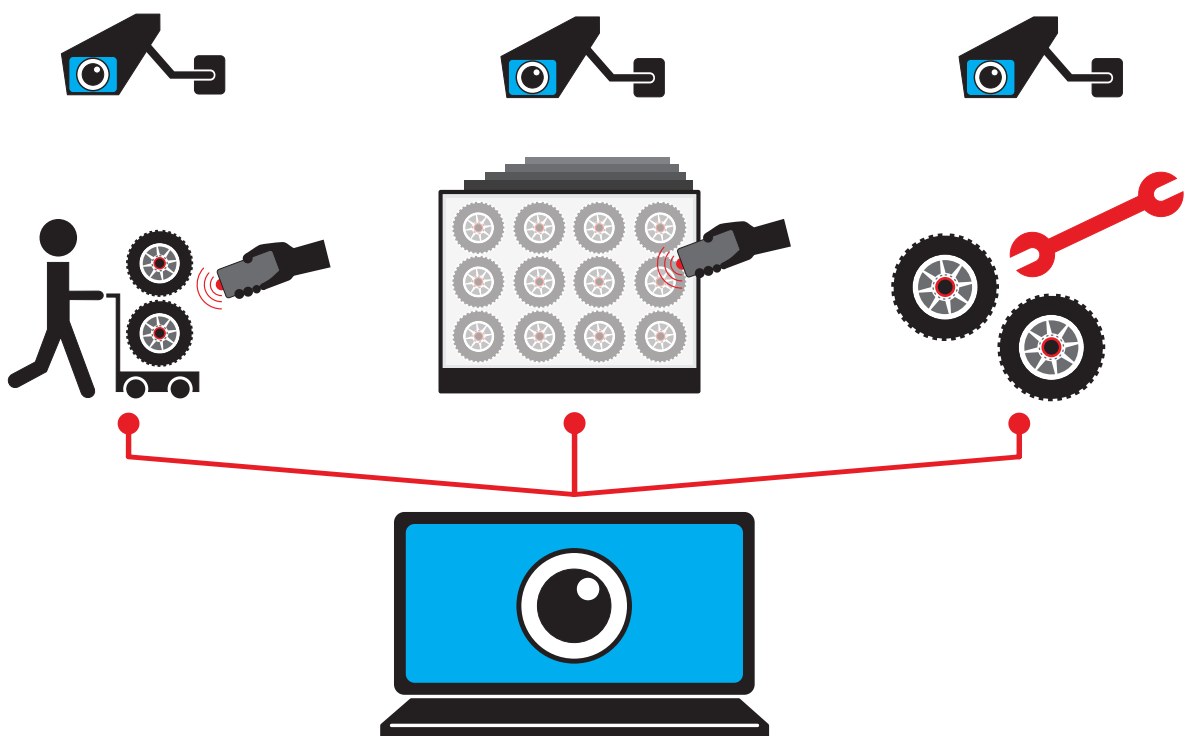

Thanks to its universal interface this product can quickly and easily integrate

with the DMS that your company uses. This option also allows quick and easy

implementation of future changes into the product.

What are the main benefits of Mobile Stock?

<ul style="list-style-type: none">• Easier creation of stock in, stock out, transfers, inventories and other warehouse operations.		<ul style="list-style-type: none">• Current and precise records of spare parts.
	<ul style="list-style-type: none">• Error prevention using the unique identification of goods by barcode.	
<ul style="list-style-type: none">• Significant time savings and increase in productivity of warehouse employees.		<ul style="list-style-type: none">• Faster dispatch of goods to the customer.
	<ul style="list-style-type: none">• Minimization of errors caused by the human factor.	
<ul style="list-style-type: none">• Quick and convenient work with a portable hand-held terminal.		<ul style="list-style-type: none">• Ability to connect to any DMS system.
	<ul style="list-style-type: none">• Current overview and control of the movement of goods in the warehouse.
