Standard Microsoft Dynamics AX – BOX solution

- > Ready-made systems of Microsoft Dynamics are a guarantee of the development and support of the standardized form. Their advantage consists in the rapid deployment by Rapid Implementation Methodology. Systems in a standardized form are also used by large and international companies.

AX – BOX for manufacturing companies

Standard functionalities of Microsoft Dynamics AX will be deployed within the implementation of areas, which are essential for the effective functioning of the company.

How the system works for example in following selected areas

Financial Management

The module will support your strategic planning through the access to information across the organization in real time. It contains tools for analysis and creation of reports, whereby you will effectively manage revenues, payables, receivables and cash flow.

- Financial Management
- Bank Management
- Receivables
- Liabilities

Supply chain management – SCM

The module covers the management of materials and raw materials, information and transactions during the entire process from suppliers to manufacturers, retailers and customers. It enables the breakdown of stocks according to dimensions and viewing and analyzing stocks in many different ways. The solution will help you control the functions of production, distribution, inventory or purchasing in order to cut operating costs.

- Purchase
- Inventory Management
- Production control (optional) - Provides the ability to create manufacturing BOMs and monitor raw materials that are used in the production of the final product. The actual consumption of raw materials, and information on realized products is automatically charged to finance from this module.
- Sales

Project management

The module will help you especially with the financial management of projects. It allows you to monitor the consumption of intangible resources (e.g. internal and external consulting hours) or the consumption of tangible goods (such as cables, concrete, raw materials). It will provide you with an overview of the financial situation of the project at any point in the project life cycle.

With module you will be able to track the consumption of time and materials and ensure financial continuity on time and material projects and internal projects. This module helps you dividing time and material to billing items while maintaining selling prices, the cost of goods and consumption of working time.

Main benefits

- Better business success through automation and simplification of trade procedures, integration with global customers, partners and affiliates.
- Quick orientation in a familiar environment. The management and staff will take quick and correct decisions necessary for profitable business.
- Support for various branches, languages, currencies, including tax, regulatory and local requirements.

Assumptions and limitations of implementing Microsoft Dynamics AX – BOX

- Without making a detailed pre-implementation analysis.
- Application installation - installation of one instance, other clients will be installed by the customer after training.
- The initial RIM parameterization of implemented modules will be prepared
- Preset authorization for the basic set of user roles. The training of administrator within the scope of 1MD will be made within the implementation.
